Argus MODEL C includes all the advanced features for precision speed photography--**ALL-AMERICAN AT POPULAR PRICE**

**FOR . . . PROFESSIONALS, INDUSTRIALISTS, SCIENTISTS
AND ADVANCED AMATEURS**

BALANCED DESIGN

This new Argus embodies the composite ideals of thousands of experienced miniature enthusiasts. By painstaking calculation and engineering skill a perfectly "Balanced" camera has finally been achieved. A true balance of lens to available film, of shutter to lens. Perfect balance of size and weight as affecting holding steadiness—symmetrical and dynamic balance of appearance, design and manipulation.

STRIKINGLY MODERN

The case is beautifully proportioned and exquisitely trimmed in gleaming metal and polished plastic with rich black morocco leatherette covering. Diamond-turned fittings of velvet smoothness greatly enhance its rare beauty of appointment. Body is cunningly designed to fit the hands perfectly and all controls are conveniently located at finger tips for unusual ease and speed of operation. The inner case is of modern plastic, insuring perfect working precision with tough resilient strength.

INTERCHANGEABLE "CINTAR" F 3.5 LENS

This new "CINTAR" f 3.5 50 mm. anastigmat lens is standard equipment on the Model C. The lens is ideal for the needs of miniature camera workers, providing all the speed required while still retaining the necessary sharpness and depth of focus. It is extremely fast and sharp, producing clear, crisp negatives that will stand enormous enlargement. The lens is fully color corrected and has the remarkable circle of confusion of 1/2000 inch on axis. Equipped with a front-operated iris diaphragm, the entire objective system moves as a whole in a helical tube mount and focuses from 3½ feet to infinity. With the latest ultra speed Agfa film, this 3.5 lens is fast enough for every occasion without the loss of definition often apparent in larger aperture lenses. Each lens is individually tested and calibrated to high standards. Additional spacer tubes, which lengthen focus, will be available for copying and close-up work.

CODE WORD CINTAR

BALANCED "MICROMATIC" SHUTTER

Model C has a shutter of entirely new design which is finely balanced in a manner most suitable for the speed of the lens. There is a range of ten speeds from 1/5 to 1/300 of a second and "bulb"—1/5 second being the lowest practical speed for steadiness when camera is held in hands. Slower speeds are obtained for tripod and rest position by "bulb" setting. The fine-grain film, generally preferred for all around use, cannot normally stand a greater shutter speed than 1/300, which is fast enough to stop any ordinary motion. The sturdy jar proof construction of this new type shutter is a real advancement in design. Tests conducted on the shutter have been operated at zero temperatures over 50,000 times without breakdown or change in rated speeds.

BUILT-IN RANGE FINDER

Accurate focusing required with the fast CINTAR f 3.5 lens is accomplished with a completely protected built-in range finder of the split image sextant type. The exceptionally clear and distinct image appears through the eye-piece in full size. View finder has a perfect infinity focus.

USES ALL TYPES OF STANDARD FILM

The Model C accommodates all types of 35 mm. double perforated film in either the 36-exposure daylight loading cartridges or the new Agfa Argus 18-exposure spools. This camera is ideal for natural color film. A non-scratching spring pressure plate holds film down in positive alignment. Double sprocket film feed prevents all possibility of jamming or film damage.

ALL-AMERICAN BUILT TO POPULAR DEMAND

The finest material and highest skilled optical engineering obtainable have gone into the production of this splendid camera. It is an All-American product carefully and expertly designed to fulfill the need for a thoroughly versatile camera suitable for every type of photography from laboratory research to the candid amateur.
